

ROLLA-TANK®

PATENT PENDING

FROM THIS

ROLLA-TANK™ is the latest in relay storage tanks to provide temporary storage of liquids in remote areas. The light weight tank can be easily assembled by one person in less than 2 minutes. Just unroll the tank, insert the four support corners, and hook the liner to the top snap clips.

ROLLA-TANK has the advantages of a framed tank with the mobility of a self supporting tank. The patent pending interior or exterior frame design can conform to uneven ground to prevent rolling.

The frame is constructed from aircraft quality aluminum with interchangeable corner supports. Corner supports fold down easily for compact storage.

The liner is constructed from industrial strength vinyl with aluminum flanges available from 1.5" - 3.0" with male or female threads. PVC flanges are also available.

Comes with heavy duty storage bag.
